NIH eRA iEdison Release Notes Version 2.0.4.0

Grantee Code

The IPF Code (Grantee Code and initial portion of the EIR number) has been modified to support an increase in digits from the current size of seven (7) values to ten (10).

- This enhancement will support the *8-digit* codes that are currently being issued to facilitate the creation of new iEdison institutions, EIRs, Patents, and other data within Edison.

- Additionally, this enhancement will match the changes that were made within the eRA/IMPAC II System.
